

AMENDMENTS TO THE CLAIMS:

Please replace the claims with the claims provided in the listing below wherein status, amendments, additions and cancellations are indicated.

1. (Currently amended) An aluminum-made heat exchanger, comprising:

a plurality of flat ~~[[tube]]~~ tubes each formed by ~~using~~ bending in a width direction an aluminum strip-shaped material of which core metal is coated with a brazing metal on ~~[[the]]~~ an outer surface thereof and is coated with a sacrificial anode material on ~~[[the]]~~ an inner surface thereof; ~~bending the strip-shaped material in the width direction;~~

~~[[many]]~~ said flat tubes ~~[[are]]~~ being disposed parallel to each other and being fixed together by brazing in a furnace using a flux for brazing thereby to join said flat tubes by means of the brazing metal to form a core of the heat exchanger; ~~and each of these parts are fixed integrally by means of brazing,~~

wherein the brazing metal is of an Al-Si alloy comprising Si 7.5 to 12% by weight, the core metal ~~is an Al-Si alloy including~~ consists of Cu 0.15% by weight, Si [[of]] 0.4 to 1.2% by weight, Mn 1.2% by weight and the balance Al, the sacrificial anode material ~~is of an Al-Mg-Zn alloy including~~ consists of Zn 1.0% by weight, Mg [[of]] 0.3 to 0.75% by weight and the balance Al; ~~the aluminum-made heat exchanger is structured by being subjected to a brazing in a furnace using a flux for brazing to join the parts being interposed by the brazing metal.~~

Docket No. F-8951

Ser. No. 10/565,096

2. (Cancelled)
